(2) Adjustable Frame Mechanism: The adjustable side frame feature, allowing the gate to accommodate varying widths without altering its aesthetic, is a distinctive technical and functional innovation. (3) Welding of Battens to Rails: The method of welding the vertical battens directly to the top and bottom rails introduces a seamless integration of components, offering both structural support and a sleek, unified appearance. (4) Rail and Batten Combination: The combination of slender top and bottom rails with substantial vertical battens creates a balanced contrast that is visually striking and functionally efficient.
